ENGAGEMENT N° 16

Référence : E-16 (GM), Notes sténographiques du 15 septembre 2011, volume 6,
page 170

Demande : «Mettre à jour le taux de rendement selon la formule d'ajustement automatique à partir du Consensus forecast» des mois de juillet et août deux mille onze (2011) ainsi que les écarts entre les taux des obligations du gouvernement du Canada de trente (30) ans et de dix (10) ans du mois de juillet deux mille onze (2011), et soustraire du résultat l'ajustement entre virgule vingt-cinq pour cent (0,25 %) et virgule cinquante-cinq pour cent (0,55 %) pour tenir compte de l'effet de la crise financière retenu pour les années tarifaires deux mille dix (2010), deux mille onze (2011).» (demandé par la Régie)

Réponse : Ci-après sont présentés le calcul du taux de rendement utilisant la formule habituelle, le détail de l'écart entre les taux 30 ans et 10 ans, une copie du Consensus Forecasts du mois d'août 2011 ainsi que le résultat associé à une soustraction de l'ajustement entre 0,25 % et 0,55 % pour tenir compte de l'effet de la crise financière retenu pour les années tarifaires 2010, 2011.

Survey Date
August 8, 2011

Every month, Consensus Economics surveys over 250 prominent financial and economic forecasters for their estimates of a range of variables including future growth, inflation, interest rates and exchange rates. More than 20 countries are covered and the reference data, together with analysis and polls on topical issues, is rushed to subscribers by express mail and e-mail.

Special Survey: Trends in Productivity and Wages (Continued from page 3)	28-29
World Economic Activity	32

- ❖ While the majority of Q2 GDP estimates have yet to be released, those that have been reported suggest a softening in global growth. **US** Q2 GDP rose an annualized 1.3% (with Q1 revised lower), **UK** GDP expanded by only 0.2% (q-o-q), while **Italian** growth was 0.3% (q-o-q). However, in **Sweden**, GDP growth expanded by 1.0% (q-o-q), bucking the downward trend.
- ❖ **Italy** and **Spain** looked in danger of being engulfed by the Euro zone debt crisis before the ECB began purchasing their bonds this past week, bringing yields back to lower levels. Both governments have pledged to liberalise their economies and dramatically reduce their budget deficit in return for ECB intervention. Meanwhile, the **US** was able to come to agreement over the debt ceiling before its August 2 deadline, but the inability of Congress to find a major compromise led Standard and Poor's to lower the country's credit status to AA+.
- ❖ Our special survey this month includes an analysis of, and forecasts for, **Productivity and Wages**, comparing long-term trends in **output per employee**, as well as **unit wage costs**, in all our featured countries (pages 3, 28 and 29).

Our next issue of **Consensus Forecasts** will be available at the end of the day on **September 15, 2011** and will include **Quarterly Forecasts**.

Pause in GDP Growth – And Interest Rate Hikes

Monthly output-based GDP recorded a disappointing May showing of -0.3% (m-o-m) following flat growth in the previous month. This dragged the y-o-y rate down from 2.8% in April to 2.2%. The unexpected fall was due to a 5.3% (m-o-m) collapse in mining, oil and gas extraction, triggered by wildfires in Alberta, as well as unfavourable weather conditions and maintenance shutdowns. Retail, public sector activity, utilities and financial services all recorded gains but this was not enough to offset the loss from the extractive industries. Indeed, goods production as a whole slumped by 1.6% (m-o-m) and was not helped by a second straight fall in manufacturing (by 0.4%, following a 0.9% dip in April). Factory sales during the same month also contracted. Industrial production expectations have dipped again this month, affected by a stronger Canadian dollar relative to the US currency which has hurt exports; moreover, latest US economic news has been worryingly glum (see page 4).

While many commentators have indicated that the May decline in GDP was due to temporary factors, clearly Q2 economic activity is trending downwards from a roaring 2010 performance. Domestic demand helped to support the economy last year on the back of a robust housing market and solid job fundamentals, but these two elements are now both ebbing. While the recent energy price shock that hit consumers is already fading, incomes are being reined in by more uncertain labour market news, affecting forecasts for personal spending and, in turn, GDP. The uncertain near-term outlook has also delayed the Bank of Canada in resuming interest rate hikes, although the bank has signalled that an increase before the end of the year could be on the cards.
