Solid on Balance, Though Profits and Production Fading
A modest 0.2% (m-o-m) pickup in GDP growth in July – from rates of 0.1% in both May and June – came on the back of 0.2% rises in both goods and services output. Industrial production jumped by 0.4% (m-o-m), buoyed by a 0.2% advance in the energy sector and a 2.0% monthly surge in utilities output (warmer weather helped to lift usage of electricity and natural gas). Manufacturing, meanwhile, recorded an upbeat 0.6% increase. However, the goods-producing sector did see declines in construction (-0.1%), agriculture (-0.1%) and mining, oil & gas extraction (-0.3%). On the services side, retail trade and the finance & insurance industry helped to shore up activity. Q3 as a whole, though, did see a moderation in GDP growth on a y-o-y basis, from a 2.4% outturn in May and 2.2% increase in June to 1.9% in July. The economy remains relatively solid, if muted, although by no means with the same deceleration seen in the US or the Euro area's spiralling recession. In fact, on the domestic demand front, Canadian retail sales reported an upbeat July, with total sales rising by 0.6% (m-o-m) after a flat June showing, helped by strong automobile trade. However, manufacturing sales reported a second straight month of decline, from a 0.8% (m-o-m) fall in June to -1.5%. New manufacturing orders tumbled even more sharply, by a massive -5.6% over the month. Production expectations have been downgraded this month.

The US Fed's latest foray into quantitative easing should have little bearing on the Bank of Canada's domestic-oriented policy. However, some observers suggest that worsening global economic conditions, easing domestic demand and a benign inflation outlook will prompt the bank to hold off from hiking its overnight lending rate for now.

Canada Overnight Lending Rate – Oct. 8, 2012 = 1.00%
