RÉPONSES DE L'AQCIE/CIFQ À L'ENGAGEMENT

E-1 Transcript, Vol 13, p. 114

Request:

E-1 (AQCIE-CIFQ): Répondre à la question qui concerne des exemples à l'égard de transporteurs et qui réfèrent à la page 9 de la présentation où il est mentionné « US Energy Utilities have propose comprehensive indexing on many occasions » sur une période de cinq ans (demandé par HQT)

Réponse de l'AQCIE/CIFQ :

Attachment Undertaking E-1 provides a listing of MRI proposals made by North American energy utilities which featured a comprehensive rate or revenue cap index (i.e., one applying to capital costs as well as CNE). This listing excludes proposals where the utility was obliged to file for this kind of MRI. PEG has not reviewed all of the proposals in detail to determine which of them also included capital cost trackers.

Some of the proposals were rejected by the regulator or altered substantially in a settlement. These proposals are shaded in the table. Information on proposals made in the last five years is boldfaced in the table.

Inspecting results, it can be seen that North American energy utilities have proposed MRIs with comprehensive rate or revenue caps more than 40 times. There have been six proposals in the last five years. Although some of the proposals for bundled power service likely addressed transmission costs, none were solely for transmission.
