

Définitions anglaises de termes relatifs aux normes de fiabilité

Generation connected to the RTP

A generating facility connected by RTP elements to contiguous elements of the main transmission system (RTP) or dispersed power producing resources connected through a collector system, by RTP elements, to contiguous elements of the main transmission system.

(Production raccordée au RTP)

Generation not connected to the RTP

A generating facility connected by non-RTP elements to contiguous elements of the main transmission system (RTP) or dispersed power producing resources not connected through a collector system, by RTP elements, to contiguous elements of the main transmission system.

(Production non raccordée au RTP)

Connected to the RTP

An element is said to be “connected to the RTP” if at least one continuous series of RTP elements exists connecting it to the RTP.

(Raccordée au RTP)

Not connected to the RTP

An element is said to be “not connected to the RTP” if no continuous series of RTP elements exists connecting it to the RTP.

(Non raccordée au RTP)
