**Objet:** No smart meter at my home

Hello Veronique Dubois, I am writing to you this morning to explain why there cannot be a smart meter in my home. My son Michael Vidakis Saucier has Tinnitus , it is a constant ringing in his ears. He has had it for 5 years now. He is 24 years old. A smart meter would make his condition worse, with all the research I have done, it is not an option for me to have a smart meter in my home. His bedroom is downstairs and that's where the electrical panel is located. I cannot put a smart meter because it would be too close to his body at night when he sleeps. He manages to be okay, but he takes big precautions, and he and I know how much this condition has affected his young life. As his mother I am a mother bear and will do anything in my power to protect his health. I am willing to pay the costs associated with a new electromechanical withdrawal option, as it may be necessary to maintain or recondition. Please add my comments to file R-3964-2016 . I thank you, Maria Vidakis
