Objet: Attn Mme Veronique Dubois, Dossier R-3964-2016

Madame Dubois,

I refuse a smart meter based on my medical knowledge of the negative impact of the transmitting devices (WHO grade 2B carcinogen), and my strong desire to apply a cautionary principle with regards to the negative effects it may have on my health and those of my wife and children. In the event that a replacement meter is obligatory, we have asked that the new meter be analog, and that the installation, maintenance, and/or replacement incur no additional fees to us. The smart meters proposed by HQ are also equipped with technology that is capable of wireless transmission of collected data, and in my opinion may actually compromise our right of privacy and pose security risk to our home.

I am aware that you have within your inventory 294000 meters composed of 112500 electronic meters and 181500 electromechanical/analog meters. These must not be destroyed and should be distributed to those clients, who like myself have duly requested them in order to maintain electrical delivery without the risks imposed from smart meters.

Sincerely,

Dr. Daniel Merritt
