Electric Vehicle Guide

Electric Vehicle Climate Credit

The EV-TOU-2 rate **uses your existing household smart meter** to track home and EV electricity use. Since all of your electricity is measured by one meter, the time-of-use price applies to your overall use and the price does not change as you use more electricity. It will, however, change depending on the time of day you use it. On time-of-use rates, electricity is at its lowest price between midnight and 5 a.m. and you can set your car's timer to start charging at this time. If most of your electricity use occurs during the day, time-of-use rates may not be the best rate for you.

EV Time-of-Use rate (EV-TOU)

The EV-TOU rate **requires a separate meter for your EV**. The EV meter tracks your vehicle's electricity use separately from the rest of your home. A licensed electrician of your choice is required to install this second meter at your expense. Solar customers are unable to use solar energy for this meter.

Choosing a Rate

Summary: Electric Vehicle Time-of-Use Rate	<p>Régie de l'énergie</p> <p>DOSSIER: 19-3786-2016</p> <p>DEPOSÉE EN AUDIENCE</p> <p>31.05.2017</p> <p>Date: C. GRABE 1/5</p> <p>Pièces n°:</p>

How do I choose an EV rate?

Find your EV usage

Your auto dealer and your vehicle's EPA window sticker can provide the information needed to estimate your EV energy usage based on the number of miles you drive each month. A typical EV consumes approximately 1 kilowatt hour per 3 miles --- therefore if you drive 900 miles in a month you will consume 300 kilowatt hours.

Determine your rate tier

Knowing your home energy use pattern is necessary to determine the best rate option. To find this information:

1. Log into "My Account"
2. Click "View my Bill", then "View Detailed Bill".
