(7) The primary drivers for the increase in the working cash requirement in 2016 as compared to 2015 are:

- Increased net gas cost lag of 3.7 days with a net gas cost lag of (4.5) days in 2016 as compared to (8.2) days in the 2015 Closing of the Books is driven by the decreased gas cost lag day and decreased gas costs expenditure in 2016 as compared to the 2015 Closing of the Books. Gas costs are paid by Enbridge Inc. with suppliers paid around the 28th day of the month after commodity has been received, previously they were paid around the 20th of the month,
- Increased net tax lag day is a result of an increase in the municipal tax lag day and increased taxes expenditure in the 2016 Closing of the Books as compared to the 2015 Closing of the Books, and,
- Decreased revenues received from customers for GST and QST.

This is partially offset by:

- Decreased O&M and taxes expenditures,
- Decreased revenue lag day of 2.0 days with a revenue lag of 37.6 days in 2016 as compared to 39.6 days in the 2015 Closing of the Books,
- Decreased O&M net lag of (2.9) days is driven by the decreased revenue lag day and increased O&M lag of 26.9 days in 2016 as compared to 26.0 days in the 2015 Closing of the Books, and
- A decrease in the working cash requirement from Uncollectibles.
