**RE : Demandes d'alimentation pour de nouvelles installations électriques situées au 434-542 (A à J),  
chemin de la Rivière-St-Louis à Beauharnois**

Dear Mr. Dubois,

We are in receipt of your response of July 8, 2019 related to our application for new electrical installations as noted above.

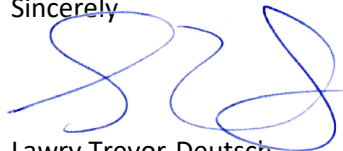

For clarity, I would like to confirm that the applications submitted to Hydro-Québec are related **solely** for data center operations with respect to the specific domes in the applications. For further clarity, the application is for 10 4-megawatt data centers on properties adjacent to the Léry substation.

We do however reserve the right to make appropriate application to Hydro-Québec for other domes that could be constructed on the properties that may be use for cryptocurrency mining as would be the case for any other company. This would but done under the guidelines set forth for the 300 MW block allocated by Hydro for this purpose.

As a final note and further to your conversations with Mr. Laliberté, the economic development rate which we have applied for, is a very important component of this project and a key driver of our decision to establish the data centers. While I can appreciate that there can be slowdowns during the summer months, given that Hydro is already well versed with the approach and technology we are proposing, we would very much appreciate an expedited response to the request by the end of the month.

Should you require any information, please contact me at your convenience.

Sincerely

Lawry Trevor-Deutsch  
SVP Corporate Affairs
